PROFILE SUMMARY

Software Engineer with 3+ years building backend systems across fintech and energy trading. At Merpay (Mercari's payment platform with 15M+ users), developed customer support platform serving 300+ CS agents, extended Help Center for Hong Kong expansion, and architected Contact Center with Google CCAI. Currently developing automated trading infrastructure for Japan's wholesale electricity market at ENEXIA, a Sumitomo Corporation subsidiary.

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering

Sardar Vallabhbhai National Institute of Technology, Surat

August 2019 - May 2023

- CGPA: 8.76/10.0
- Relevant Coursework: Deep Learning, Communication and Networks, C Programming

PROFESSIONAL EXPERIENCE

ENEXIA LLC – Software Engineer (SDE-2)

Tokyo, Japan

Renewable Energy Aggregator (Sumitomo Corporation)

November 2025 - Present

- Designing and building intraday trading system in Golang for JEPX wholesale electricity market, expanding beyond spot trading for real-time risk mitigation.
- Designing microservices architecture for automated bidding with sub-second latency and 99.9% uptime requirements.
- Collaborate with MLOps, Data Engineering, Data Science, and Business Administration teams to align trading system requirements with market operations and analytics pipelines.
- Implemented OIDC federation and restructured IAM permissions following least-privilege principles across cloud infrastructure.
- Provisioned AlloyDB, Artifact Registry, Cloud Run, and Cloud Build pipelines for secure deployment of trading microservices.
- Conducted design and code reviews for 3-person contractor team developing socket-based JEPX Gateway system.

Merpay / Mercari Group – Backend Engineer (SDE-1 → SDE-2)

Tokyo, Japan

Mobile Payment Platform (15M+ users, 1.7M+ merchants)

October 2023 - November 2025

- Built features for customer support platform serving 300+ CS agents, reducing Average Handling Time by 200+ hours monthly.
- Added gRPC stream interceptor-based audit logging adhering to Japanese financial regulations for fintech companies.
- Extended Help Center search from Japanese to Traditional Chinese to support Taiwan and Hong Kong market launches.
- Developed News publishing frontend in Next.js in collaboration with Foundation Backend engineers, enabling CS agents to notify Mercari users.
- Led infrastructure changes for Vue 2 to Next.js migration in collaboration with Central CS Foundation and Merpay Frontend Engineering teams, modifying Ingress and nginx routing for zero-downtime rollout.

- Developed live data loading, inquiry management, memo-taking, and inquiry transfer features for GCP CCAI-based Contact Center.
- Architected live chat extension for Merpay in collaboration with Common Foundation product platform, implementing VDI restrictions meeting fintech compliance for KYC, payments, and credit inquiries.
- Mentored engineers in Devdojo and BUILD programs, and supported other tools integration with central authorization platform & with access grant.

ChargeBee – Site Reliability Engineering Intern

Remote

SaaS Subscription Billing Platform

January 2023 - July 2023

- Developed monitoring automation tool that reduced false/duplicate CloudWatch alarms by 40%, improving on-call engineer efficiency and reducing alert fatigue across SRE team.
- Contributed to design of auto-sharding system for provisioning MySQL read-replicas at 70% memory utilization, preventing database performance degradation during traffic spikes.

Gojek (GoTo Group) – Software Engineering Intern

Remote

Southeast Asia Super-app Platform

June 2021 - October 2021 & February 2022 - July 2022

- Contributed to Meteor platform building metadata collection system aggregating petabytes of daily data from 5+ heterogeneous sources across Gojek's ride-hailing, payments, and logistics services.

PROJECTS

Finance Tracker

[GitHub Repository](#)

- Led hackathon team of 4 to develop React Native app for personal finance and expense management.
- Implemented receipt scanning using GCP-based OCR with ML model for automatic category classification (71% accuracy).
- Integrated OCR and ML model via Flask backend with MERN stack for user management.

TECHNICAL SKILLS

Programming Languages: Golang, Java, Python, JavaScript/TypeScript, Node.js

Frameworks & Tools: gRPC, Next.js, Vue.js, React, React Native, Flask

Databases: PostgreSQL, Cloud Spanner, MySQL, AlloyDB, Elasticsearch, BigQuery

Cloud & Infrastructure: GCP, AWS, Kubernetes, Terraform, Docker, Cloud Build, Nginx

Specializations: Microservices Architecture, System Design, Infrastructure Optimization, Security

ACHIEVEMENTS

ode2code: Ranked 6th among 17,000 participants in national coding and quiz competition

Hackathons: Won prizes at Hack Dotslash, Charge Up (ChargeBee), and Code For Good (JP Morgan Chase)
